A nanocomposite composed of gold nanoparticle (Au) and three-dimensional graphene (3DGR) was electrodeposited on the surface of carbon ionic liquid electrode (CILE), which exhibited synergistic effects with improved electrochemical performance. Voltammetric behaviors of luteolin on Au/3DGR/CILE were evaluated with the electrochemical parameters calculated. At the selected conditions differential pulse voltammetric responses had good linear relationship with luteolin concentration from 5.0×10⁻⁸ to 5.0×10⁻⁵ mol L⁻¹ and the detection limit was 7.59×10⁻⁹ mol L⁻¹. The Duyiwei soft capsules sample was successfully detected by the proposed method.

Keywords: Three-dimensional graphene, Gold nanoparticle, Luteolin, Carbon ionic liquid electrode, Electroanalysis
